

Trak-Rak®

For Carpet and Vinyl Store & Display Racks

Store and display more carpet or vinyl rolls in less space with Trak-Rak. Each roll of goods is immediately available for showing or cutting. The new modular Trak-Rak gives you a choice of 45 floor plans, from a single rack to multiple racks with hundreds of rolls. From carpet stores to home centers you'll find several capacity options available for your individual needs.

**Seven
Exciting
Reasons
Why
Trak-Rak
Will
Roll-up
Your
Carpet
Sales!**

#1

Trak-Rak stores and displays more rolls in less space. The vertical storage system formalizes your carpet department: no need for back room or warehouse storage. Consolidating and organizing your inventory gives you the opportunity to cover more price points in the colors and patterns needed.

HOME CENTERS
Home Improvement Warehouses

24133 W. 143rd St. Plainfield, IL 60544

#2 TRAK-RAK

prevents damage to carpet due to frequent handling. Storing products off the floor eliminates crushing and soiling.

#3 TRAK-RAK is conducive to

shopping. The mass inventory display is an impressive sales tool compared to selling from swatches. Self-help design turns shoppers into buyers because all of your stock is on the sales floor.

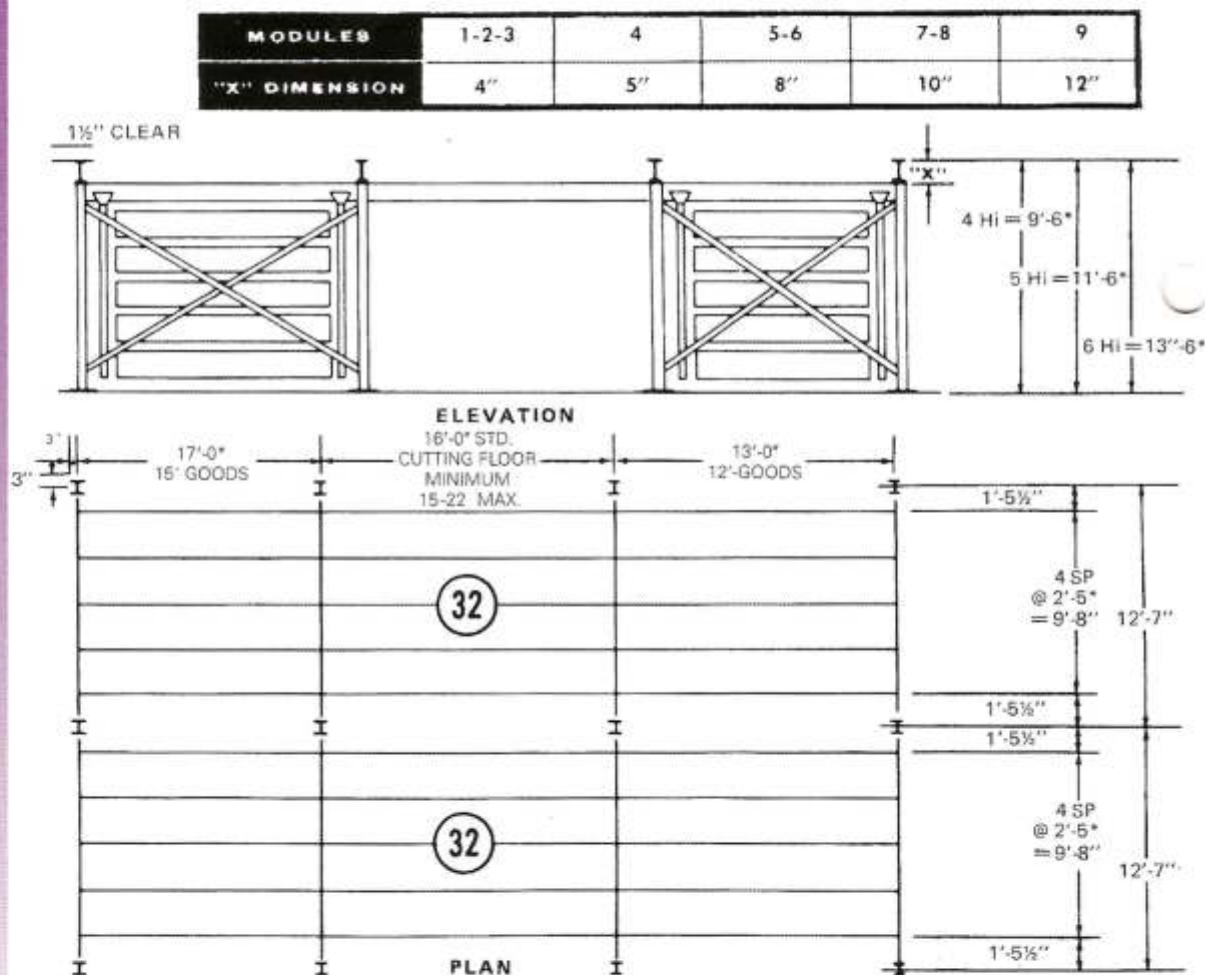

#4

The modular concept of the TRAK-RAK system allows us to custom build your display system to your exact requirements, and it also allows you to increase your inventory as your needs increase.

Trak-Rak® Modular Carpet Display Racks

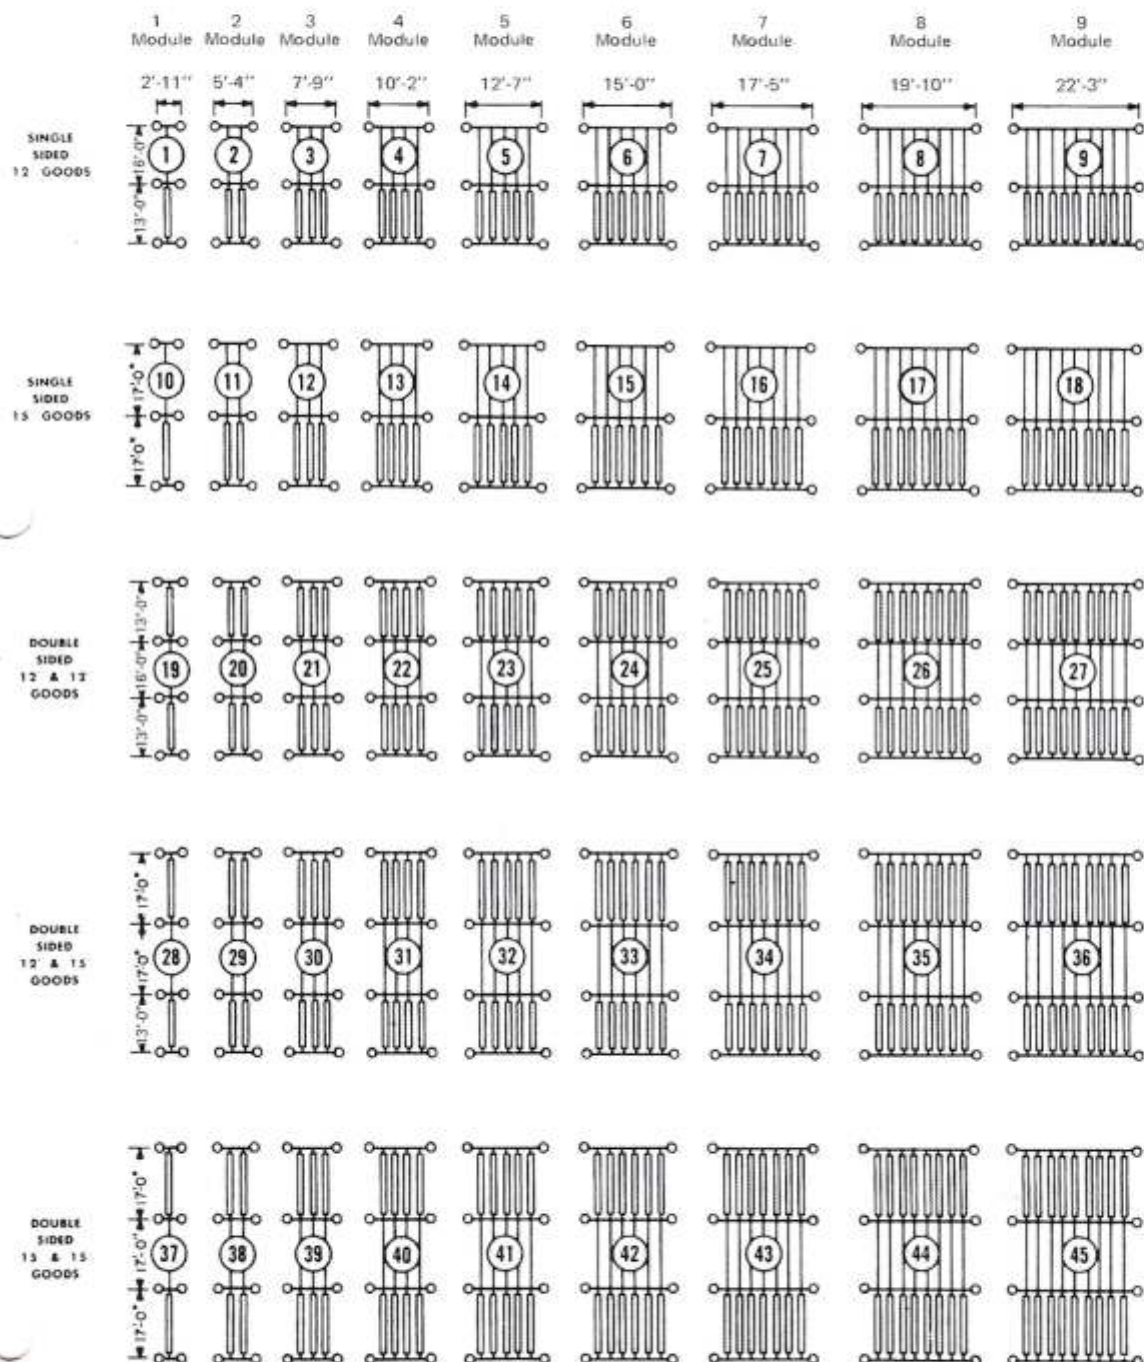

Floor loads per square foot including steel, racks and carpets:
based on 500 lbs. per roll for 12' goods and 750 lbs. for 15' goods:

4 high 12' = 110 lbs.	5 high 12' = 125 lbs.	6 high 12' = 150 lbs.
4 high 15' = 115 lbs.	5 high 15' = 135 lbs.	6 high 15' = 160 lbs.

All dimensions indicated with asterisk can be altered to suit individual conditions. Where ceiling height will allow, we suggest the steel be made as high as possible as the additional cost is negligible. Additional tubes can be added at any future time for just the extra cost of tubes and fittings. TRAK-RAK can also be designed to attach to customer's roof steel. Where the system is to be installed in an area other than the ground floor, or if a basement is below, an architect or engineer should be consulted regarding distribution of weight, or send us a sketch of the building showing type of construction and we will make recommendations.

**We will customize
any rack to your
specifications**

#5 TRAK-RAK is
built to last

and operate trouble free.
Quality structural steel
construction combines
with precision ball-
bearing wheels to provide
years of performance,
safety and reliability.

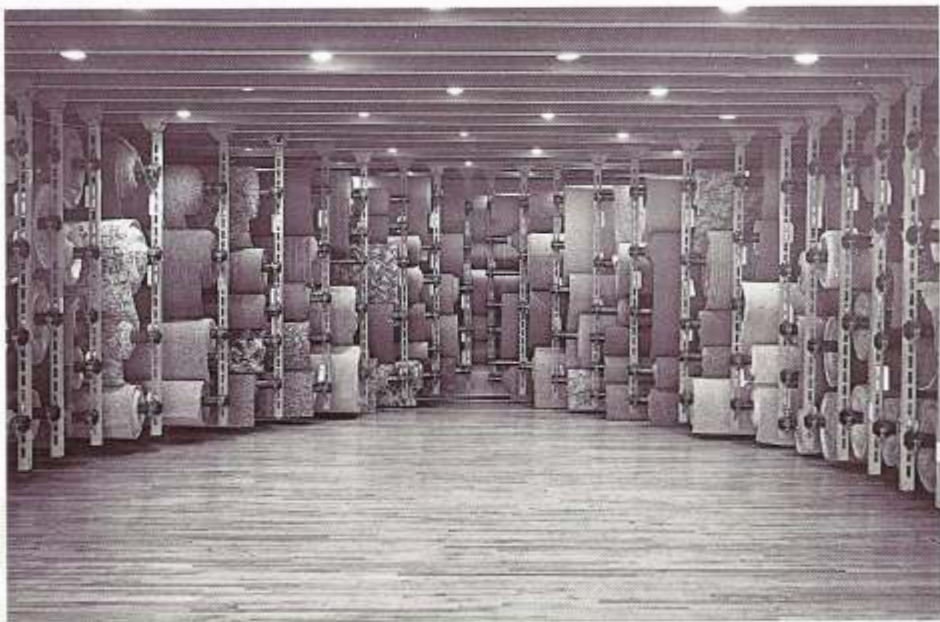

#6 TRAK-RAK

design eases the
burdensome nature of
full carpet rolls.
Engineered for the
weights involved, roll
goods are handled
only once until sold.

The **built-in
cutting floor**
facilitates sales and
operations by one
sales person.

#7 One turn of
your carpet inventory
in a 60 roll TRAK-RAK
system will return
more than your initial
**capital
investment.**

With the TRAK-RAK
system installed, you will
develop additional
reasons of your own why
TRAK-RAK helps roll up
carpet sales.
